

The Case Ensemble of system is an innovative, web-based extranet collaboration tool designed for legal matter management.

Case Ensemble technology allows legal teams from different organizations and remote offices to share a single, secure, online area to track case information, maintain a master calendar, collaborate on documents and post work product.

With its off-the-shelf, instantly customizable configurations, the Case Ensemble system can harmonize even the most dissonant complex litigation matters within hours.

system features

- a case calendar tool that allows team members to work with one master calendar
- a project management tool that tracks tasks, assignments, and important dates
- a document collaboration tool that enables document editing, tracking, and full-text or keyword searching
- a case management tool that tracks matter data points such as court, counsel, and plaintiff information
- a bulletin board tool that allows team members to post items of interest
- an e-mail notification tool that can notify team members when information of interest is added, or alert them to approaching due dates
- a customization tool that offers users "shrinkwrap" settings for many different types of matters

users

The defense of large-scale litigation requires coordination among a number of different players: in-house legal teams, law firms, insurers, co-defendants, court reporters, consultants, and others. The CaseEnsemble™ system can be scaled to accommodate as many different parties, proceedings, and players as is approprate for any given litigation strategy. Its immediate, real-time coordination features significantly reduce the number of hours spent on litigation support—translating into savings. Costs associated with faxes, overnight mail, telephone calls, and photocopying are substantially reduced. Plus, sophisticated CaseEnsemble reporting and collaboration tools allow the legal team to focus their energies on litigation strategy and results, rather than on process.

technology

The CaseEnsemble technology is hosted on secure servers maintained by Xerdict Group LLC, the developer behind CaseEnsemble's premier services. Advanced, accessible and secure, the CaseEnsemble system leverages a powerful database and is delivered over the web, so no specific software or hardware is needed to use it. The system can be accessed 24 hours a day, seven days a week, from anywhere in the world, via an internet connection.

CaseEnsemble's easy accessibility does not compromise security. Data is encrypted at the highest possible level, and the application uses numerous other best-in-breed technology security strategies to protect client data.

Xerdict Group LLC offers technology services to corporate legal departments, law firms, and other business entities. In addition to the CaseEnsemble™ system, Xerdict Group's flagship matter management product, Xerdict™ technologies offer expertise in collaboration systems, document management, electronic discovery and other technology-driven litigation support systems and strategies.
